Peng Gu

Ph.D. Student, University of California at Santa Barbara (UCSB)
Email: peng_gu @ucsb.edu
Personal Website: penggu.github.io

Education

2017 - now **University of California, Santa Barbara** **Santa Barbara, CA**
Ph.D. Student in Electrical Computer Engineering
Advisor: Yuan Xie

2015 - 2017 **University of California, Santa Barbara** **Santa Barbara, CA**
M.S. in Electrical Computer Engineering
Advisor: Yuan Xie

2011 - 2015 **Tsinghua University** **Beijing, P.R.China**
B.S. in Electronic Engineering
Advisor: Yu Wang

Professional Experience

2015 - now **University of California, Santa Barbara** **Santa Barbara, CA**
Student Researcher in Scalable Energy-efficient Architecture (SEAL) Laboratory

07-09/2019 **Samsung Semiconductor, San Jose** **San Jose, CA**
Memory System Accelerator Architecture Research Internship in Memory Solution Lab

07-09/2018 **Samsung Semiconductor, San Jose** **San Jose, CA**
Memory System Accelerator Architecture Research Internship in Memory Solution Lab

07-09/2017 **Samsung Semiconductor, San Jose** **San Jose, CA**
Memory System Accelerator Architecture Research Internship in Memory Solution Lab

07-09/2016 **Hewlett Packard Labs, Palo Alto** **Palo Alto, CA**
Accelerator Architecture Research Internship in Platform Architecture Group

07-09/2014 **University of California, Los Angeles** **Los Angeles, CA**
Student Researcher in Design Automation Laboratory

07-09/2013 **Intel Asia-Pacific Research and Development Center** **Shanghai, P.R.China**
Technical Internship in Mobile Computing Group (MCG)

2013 - 2015 **Tsinghua University** **Beijing, P.R.China**
Student Researcher in Nanoscale Integrated Circuits and Systems (NICS) Laboratory

Research Summary

Peng Gu's current research interests include near-data-processing / process-in-memory architecture, memory sub-system, and domain-specific accelerator design. In the past, he also participated several projects related to secure hardware design and cost-driven IC design for 2.5D/3D technology.

Near-Data-Processing / Process-in-Memory Architecture
Memory-centric architecture has shown great potential to tackle the "memory wall" challenge of traditional compute-centric accelerator. From technology perspective, he explored emerging RRAM technology[J4,6,5][C12,13,14,15], mature DRAM-based technology [J1][C1,2,4], and commodity-available HBM technology [C3][P1,2,3,4,5].

Memory Sub-system Design
He helped build up a circuit-level model to enable evaluation of device/circuit innovations for emerging NVM [C9] as well as Neuromorphic computing systems [C12]. Also, he designed a transaction command based simulator for system architects to evaluate the performance of emerging NVM solutions [J2].

Domain-specific Accelerator Design
With the slowing down of Moore's law, customized computing architecture is becoming a promising approach to improve applications' performance and energy-efficiency. He explored accelerator designs for several emerging data-intensive application domains, including deep learning [J1,3,4,5,6][C12,13,14,15][P2,3,4,5], image processing [C1], graph analytic [C3], and bioinformatic [C2].

Cost-driven and Secure Design for 2.5D/3D Technology
2.5D/3D technology enables high-density and heterogeneous integration of multiple dies, thus allowing flexible designs. In this project, he explored (1) thermal-aware design utilizing die-stacking architecture for side-channel prevention [C7,C8]; (3) cost-efficient 3D integration for secure split-manufacturing [C5,C6]; (3) analytical cost model with 3D and interposer-based 2.5D die integration for IP reuse [C10,C11].

Awards and Honors

2016 A. Richard Newton Young Student Fellowship, Design Automation Conference
2015 Holbrook Foundation Fellowship, The Institute for Energy Efficiency, UC Santa Barbara
2015 Excellent Undergraduate Thesis Award, Tsinghua University
2014 Academic Scholarship, Dept. of Electronic Engineering, Tsinghua University

Academic Service

2017 Web Chair, 24th IEEE International Symposium on High-Performance Computer Architecture (HPCA)
